

What are the specifications for oil-injected rotary screw air compressors?

The document provides specifications for various models of oil-injected rotary screw air compressors, including: 1) Capacity and pressure ranges from 0.5-28.5 m³/min and 0.7-1.3 MPa depending on the model. 2) Motor power ranges from 5.5-220 kW. 3) Noise levels are generally between 65-75 dB (A).

What is a screw compressor manual?

This manual covers the working principle and main structure of our screw compressor. In order to let the users make the best use of our products, we try to compressor. Read this manual before the installation and startup of the compressor. Contact our service department at any time if you need assistance. General Description

How does a compressor lubrication system work?

decreases the noise made by the high speed of the compressor. The lubricant weight is about 5-10 times that of air. The design provides for enough inlet air, and the air is modulated by an inlet valve. As the rotors rotate they create a vacuum which sucks air in through the inlet valve.

What is a screw-type air compressor?

Screw-type air compressor structure of a unique design, a compact, stylish appearance, high efficiency, small energy consumption, low noise characteristics and long life, is a smart environment-friendly products. Is widely applied in metallurgy, machinery, chemicals, and mining, and electric power industries of the ideal gas source equipment.

What is a screw air compressor?

Air compressor is modular in design, screw rotor, oil and gas separation extinguishers, coolers, are installed in a motor, within the framework of acoustic enclosures through the noise of rubber materials. Screw air compressor is the main components of screw head, the separation of oil and gas cylinder.

How to adjust air compressor?

Air compressor used automatic correction system, so as long as the guarantee of a pulley in the same plane. First head of the pulley fixed in the right position, then adjust the motor on the belt at the same level surface. When the motor or nose been moved or re-installed, the patch must be re-coupling of.
