Is the offshore drilling rig market going down in 2024?

The year 2024 has been another strong year for the offshore drilling rig market with high utilisation and dayrates. However, the winds of change have started to blow, and the market is already showing some signs of weakening demand and declining dayrates across the three main rig types - jackups, semisubs, and drillships.

Does deepwater FID support long-term rig demand?

There are at least 15 regions of the world with deepwater FID potential to support long-term rig demand. All have widely varying degrees of potential, risks and timelines. The Orange Basin in Namibia screens as potentially most impactful on rig demand after various discoveries in 2022-2024.

Will offshore drilling continue in 2025?

Offshore drilling sees strong 2024, but market corrections expected in 2025 due to declining demand and dayrates. Inflationary pressures to drive changes across rig types.

How has drilling changed over the past decade?

Drilling onshore and offshore has been challenged over the past decade. With shale activity technology improvements that have been discussed previously, the drilling rigs required to sustain production have been reduced by about 30% over the last several years.

Why do drilling rigs have incomplete backlogs?

Drilled but incomplete backlogs provide flexibility in operations and support operators in transitioning to a return-focused business model. During pandemic, there was a huge build-up of DUC wells as operators were unable to get out of drilling rig contracts.

Why are DUC backlogs causing a lag time between drilling & completions?

Although DUC backlogs continue to get liquidated, service sector constraints and cost inflation are aggravating the lag times between drilling and completions and delaying production growth from the rise in activities.
