What is a screw compressor?

A screw compressor is a type of rotary compressor which compresses air due to screw action. The main advantage of using this compressor is that it can supply compressed air continuously with minimum fluctuation in delivery pressure. It is usually applied for low-pressure applications up to 8 bars.

What is a high pressure air compressor?

High-pressure air compressors are devices designed to compress and provide air at higher than normal pressures (usually over 150 psi or 10 bar).

How much power does a screw air compressor have?

Nascent Machinery Company is manufacturing the screw air compressor models with power ranging from 10 hp to 500 hp (7.5 kw to 400 kw). These direct driven compressors have standard full load pressure rating from 110 psi, 125 psi, 150 psi and 175 psi, 220 psi (0.8Mpa, 1.0Mpa, 1.3Mpa, and 1.6Mpa). Thank you for choosing our Screw Compressor.

Why do oil-free screw compressors have a high build-in pressure ratio?

The build-in pressure ratio is limited by the limiting temperature difference between the inlet and the discharge. This is why oil-free screw compressors are frequently built with several stages and inter-stage cooling to reach higher pressures. Liquid-injected screw compressors

What are asymmetric screw compressors?

The first twin screw compressors had asymmetric rotor profile and did not use any cooling liquid inside the compression chamber. These were called oil-free or dry screw compressors. Modern, high-speed, oil-free screw compressors have asymmetric screw profiles, resulting in significantly improved energy efficiency, due to reduced internal leakage.
