

Midwest drill rigs

What rigs does Midwest drilling use?

Midwest Drilling utilizes both truck mount rigs and all terrain rigs. This versatility gives us the ability to handle almost any project no matter what the ground conditions may be. Mountains...desert...forest...rocky...sandy...we've got it all under control.

Who is Midwest drilling?

Since 1985, Midwest Drilling, Inc. has provided expert geotechnical and environmental drilling for engineering firms, government agencies and land developers throughout the Midwest United States region. With over 10,000 successful projects under our belt, we have proven our reliability and expertise.

How does Midwest drilling handle a geotechnical project?

GEOTECHNICAL DRILLING. Midwest Drilling can handle your project from beginning to end. We use two part field logs so you can receive samples and logs as soon as the last sample is taken. We have retained working relationships with many clients for fifteen to twenty six years and counting. Read more -> **ALL TERRAIN DRILLING.**

What is mud rotary drilling?

Mud rotary drilling method is used when drilling is below the ground water table or in unconsolidated material such as sand or gravel. By mixing bentonite with water the borehole can be advanced using a roller bit. The walls of the boring become coated with the bentonite "mud" and allow tooling to be placed in the borehole for sampling purposes.
