Can a screw air compressor produce oxygen in a PSA oxygen plant?

Using a Screw air compressor, oxygen can be produced efficiently in a PSA oxygen plant. From atmospheric air, the production of Oxygen gas is based on the Pressure Swing Adsorption (PSA) principle by adsorption of oxygen gas.

What is a rotary screw air compressor?

A rotary screw air compressor is one of the two types of positive displacement gas compressors. It uses two rotors to create the pressure needed for air compression. They are one of the easiest types of air compressors to use and maintain. The other type of positive displacement compressor is the reciprocating or piston compressor.

How does an oil-free screw compressor work?

The built-in pressure ratio is limited by the limiting temperature difference between the inlet and the discharge. This is why oil-free screw compressors frequently work in several stages and interstage cooling to reach higher pressures. One variant is known as an oil-flooded compressor or an oil-injected compressor.

How is oxygen produced from atmospheric air?

From atmospheric air, the production of Oxygen gas is based on the Pressure Swing Adsorption (PSA) principle by adsorption of oxygen gas using a special grade of imported Zeolite Molecular Sieves (ZMS). Atmospheric air is compressed by a screw compressor to a pressure of 7.5 kg/cm<sup>2</sup>g and cooled by Air Cooler.

How does a compressed air outlet work?

The compressed air is then displaced to the outlet. Each screw element has a fixed, built-in pressure ratio dependent on the length and pitch of the screw. As well as the form of the discharge port. To attain maximum efficiency, the built-in pressure ratio must be adapted to the required working pressure.

How does a PSA unit produce oxygen?

Raw Oxygen gas of 93-95% purity at 4.5-6 Kg/cm<sup>2</sup>g pressure and having a Dew point of -40 deg C is produced by the PSA Unit. The produced oxygen flows to a surge vessel to balance the fluctuations in pressure and concentration, which can then be stored and transported.
