What is a pneumatic rock drilling machine?

A pneumatic rock drill drives the piston forward in the cylinder with compressed air, which makes the drill bit hit the rock. With the advantages of simple structure, easy operation, and low price, the pneumatic rock drilling machine is the most widely used rock drilling machine.

What are pneumatic rock drills used for?

Commonly used for civil engineering projects, pneumatic rock drills are used in the demolition of buildings, dredging out harbours and crushing rocks during the groundworks phase of the project. These tools break into rock formation by using a chiselling action, as opposed to a rotary one.

How does a pneumatic drill work?

A pneumatic drill relies on compressed air pressure for power. Pneumatic drills are one of the most efficient drilling tools in the market in terms of capacity, productivity, and functionality. For example, a sledgehammer will hit the ground ten times a minute, while pneumatic drills can hit the ground 1500 times every minute.

How do I choose a pneumatic rock drill?

There are many things to consider when choosing a pneumatic rock drill, as drills come in several weight classes and sizes. The smallest pneumatic hand drill weighs in around 8 pounds while the largest sinker drills can weigh in near 70 pounds. The first thing you want to determine is the hole diameter and depth you want to reach.

How loud is a pneumatic rock drill?

INTRODUCTION The pneumatic rock drill is one of the most severe noise sources in the mining industry. A 1971 environmental noise survey in 21 coal mines by the Bureau of Mines revealed that pneumatic rock drilling for the installation of roof bolts exposed individuals to the highest sound levels observed, a range of 104 to 118 dbA (7).
