

# Rock Drill Installation Instructions

How do you drill a bedrock well?

A water and mud slurry is pumped down through the drill bit to clear the crushed rock out of the well. This rotary process is the most common and least expensive way to drill a bedrock well. A well can also be drilled using the percussion process which uses a falling weight to pound and pulverize the rock at the bottom of the well.

How do you drill a rock with a drill bit?

To drill a hole in a rock using a drill bit, position the rock onto a stable surface and add enough water to keep the bit wet and the rock clean of debris while drilling. The water also keeps the rock and drill bit cool. Don your safety glasses and dust mask, and start drilling.

How do you drill a hole in a rock template?

is given Drill holes : Begin at the highest point of the rock and drill a 2 inch diameter hole through the template to a depth of 24 inches. Continue drilling the remaining holes through the template to the same depth, when measured from a horizontal line. All rock dust should be c

How do you drill a Slo?

pole size. Place the holes to be drilled point outward from the pole center. The proper slope is given Drill holes : Begin at the highest point of the rock and drill a 2 inch diameter hole through the template to a depth of 24 inches. Continue drilling the remaining holes through the template to the same depth, when measured from a horizontal

How do you attach a rock stud to a pole?

horizontal line. All rock dust should be cleaned out. Loosely Insert connect the bands anchors : with the studs. With all holes drilled, remove the template and drop the anchors into the holes. Erect pole & tighten bands : Lift and hold the pole in place vertically. Tighten all the studs to grip the pole within
