How does a water well drilling rig work?

Water well drilling rigs employ different drilling methods, such as cable tool drilling and rotary drilling. In cable tool drilling, a heavy drill bit is repeatedly lifted and dropped to break through the ground. Rotary drilling, on the other hand, uses a rotating drill bit to cut through the soil and rock.

How is rotary well drilling done?

To perform rotary well drilling, you need a large cutting bit, lengths of steel drill pipe with threaded joints, a motor to turn and lift the drill pipe, and a sturdy mast to support the pipe. Rotary drilling also involves mixing bentonite clay or other materials in the jetting water to improve its ability to lift cuttings. Add these components together, and you are ready for rotary well drilling.
