What is a rotary drill pipe?

Rotary drill pipes are included in a complete drill stringand made by joining a pin end tool joint,a mid-body tube and box end tool. Different grades of raw material are used so the pipes are well suited to a variety of rock hardness and abrasiveness. Shock absorbers are available for both rotary and down-the-hole (DTH) drilling.

How does a rotary drill work?

Rotary technology uses a sharp,rotating drill bit and downward pressure to cut,or crush,through the subsurface. Impact energy is supplied to the drill bit from either an above ground or down hole impact hammer. This impact force aids in the drilling.
