How does a screw air compressor work?

Screw air compressor is divided into air cooling type and water cooling type, through the fan or water forcing cooling. Air cooling system consists of cooling fan, oil coolers and air cooler. The cooled air is pumped into the fan; go through oil cooler and air cooler, and at the same time, cool and compressing lubricating oil and air.

How to stop air compressor after unload?

Tighten the valve after make sure there is no condensed water. And then open the valve of the supply air. 2? Start: switch on the power, and click the "ON (I)" on the panel, then the compressor start working. 3? Stop: click "OFF (O)" on the panel, air compressor will automatically stop after unload for some times.

How do I Reset my air compressor?

Refer to Voltage Control Air pressure Exhaust temperature Oil level The controls will show a "Power Fault" error. Press the Enter button to reset and restart compressor. Storage If the machine is stopped for over three weeks: Wrap electrical equipment such as the control panel with plastic or oil paper to

What is air compressor process?

Air compressor process includes air system, lubricating oil system and cooling system. After air into the air filter removing dust, it is compressed in the air end through the inlet valve.

What should I do if my air compressor is not working?

button on controls. If trouble persists, check line pressure does not exceed maximum operating pressure of the compressor (specified on nameplate)3. Wire size for power supply too small. Contact pressure is too low during in unload mode Decrease air consumption or increase number of replace air filter Disassemble and

What happens if air compressor is loaded after a period of delay?

power applied after a certain period of delay. air compressor is loaded and pressure inside gas tank begins to increase.

As a leading DEHAHA air compressor manufacturer, we specialize in oil-injected & oil-free, low & high-pressure, and screw air compressors.
