

Special Customization Standards for Screw Air Compressors

What is the temperature limit for a screw compressor?

Standard screw compressor package design based on IIAR/mechanical code equipment room limits of 104°F(40°C). Screw package high temperature limit based on WEG motor. Other motor ratings are available for special applications. Screw package low temperature limit based on oil temperature limits.

Who makes compressed air standards?

In the compressed air industry, standards may also be produced by trade associations such as PNEUROPEAN (European committee of manufacturers of compressed air equipment, vacuum pumps, pneumatic tools and allied equipment), or its counterpart CAGI (United States Compressed Air and Gas Institute).

Do regulations apply in the compressed air sector?

In the compressed air sector, as in many other industrial sectors, regulations apply. They may include requirements that are defined by legislation as well as optional regulations or recommendations, as for national and international standards. Sometimes regulations in standards may become binding when they come into force through legislation.

What are the requirements for a compressor?

Compressors shall be guaranteed for head, capacity, and satisfactory performance at all specified operating points and further shall be guaranteed for power at the rated point. The volume capacity at the surge point shall not exceed the specified percentage of normal capacity at normal speed, and normal (unthrottled) suction conditions.

What are the requirements for oil flooded screw compressors?

The application of oil flooded screw compressors for instrument air and of dry running rotary screw compressors, sliding vane compressors and rotary lube compressors for process duties, requires the explicit approval of the Company. Rotary-type positive displacement compressors shall be in accordance with API Std. 619.

Do centrifugal compressors comply with API STD 617?

Centrifugal compressors shall conform to API Std. No. 617 for all services handling air or gas, except machines developing less than 35 kPa (0.35 bar) from atmospheric pressure, which may be classified as fans or blowers.
