When it comes to drilling techniques, down the hole drilling has been gaining popularity for its efficiency and precision. This method involves using a ...

When using a down the hole drill, the hammer is located behind the bit inside the hammer drill. Compressed air is forced down through the hammer, it strikes ...

Aqueous drilling through clay has always been a potentially difficult situation and, over the years, sundry solutions have been presented to combat ...

DTH drilling, also known as down the hole hammer drilling, involves a pneumatic hammer connected to the bottom of the drill string. This method is commonly used in mining, ...

Learn how to use down-the-hole hammers to enhance pile driving construction, improving efficiency, reducing costs, and ensuring high-quality ...

DTH is short for "down-the-hole". Since the DTH method was originally developed to drill large-diameter holes downwards in surface-drilling applications, its name originated from the fact that the percussion mechanism followed the bit down into the hole. Applications were later found for the DTH method underground, where the direction of drilling is generally upwards instead of downwards.

The reason customer want to drill the hole is that drill and blast is the most efficient and economic way to break rock instead of excavating it. ...

At the same time, the mud pump plays a "double guarantee" role: first, the mud is injected into the bottom of the hole through the drill pipe to form a mud skin on the hole wall, ...

Drilling the Borehole - The rig's drill bit rotates or pounds into the ground, breaking through tough surface layers such as clay and caliche. ...
