

The screw air compressor has a smell of oil smoke when pumping air

Why does my air compressor smell like rubber?

The air valve holds the air in the tank. If the air valve in your compressor unit is faulty, the air will escape from the tank. This puts a strain on the air compressor engine and can cause smoking. The smell of burning rubber is mostly due to an oil leak.

Why do air compressors smoke?

The air compressor is designed to function with a system that properly circulates oil, which lubricates the engine and air pump. Smoking air compressors is usually the outcome when the oil level in the system drops below the recommended level.

What should I do if my air compressor starts smoking?

The first action you should take if your air compressor starts smoking suddenly is to turn off the engine. This action can save your air compressor and prevent further damage if the oil level has dropped too low. After allowing your air compressor cool down, have a look at the following parts to know if they have been compromised.

What does it mean if your air compressor is vomiting oil?

I call this an 'oil vomiting' air compressor. It's when oil flows back out through the inlet filter, at the time that a screw compressor stops. So, it's a bit like vomiting. And if you've ever seen it happen, it really looks a bit like the compressor is vomiting oil. So why and when does this happen?

What happens if a compressor runs unloaded?

When the compressor runs unloaded, it is still running, but it is not actively pumping air or building any pressure. The inlet valve is closed, so no 'fresh' air can be sucked in. The screw element is turning but not taking in any new air.

How does compressed air escape from a compressor?

Trapped air wants to escape. Meanwhile, the compressed air tries any way possible to escape the air compressor. One way is back to the screw element and out through the inlet filter. A part of the air/oil mixture will make it back past the check valve and/or the oil-stop valve. And there will be a good amount of oil in the screw element already.
