

The Uralmash-15000 drilling rig, an improved model with a new target depth of 15,000 meters, was built up on site in 1974 to make the Kola ...

From 1975 to 1991, the drilling team operated a specially designed Uralmash-15000 drilling rig that weighed 15,000 tons and had a 74-meter high tower (Fig. 2).

Uralmash ARKTIKA Drilling Rig a new Russian drilling rig that can be used for drilling wells with the depth up to 6 kilometers. Sectional drilling rig heavy duty modern Russian system that ...

Uralmash is a manufacturer of drilling rigs for production and deep exploration drilling. It offers mobile, stationary, and cluster drilling rigs, mud pumps, winches, rotors, hook blocks, and ...

The most important goal of the holding's activities is to supply customers with modern, highly efficient drilling rigs in strict accordance with the terms of contracts, providing customers with ...

The survey to find a suitable drill site was completed in 1965 when project leaders decided to drill on the Kola Peninsula in the north-west portion ...

The drilling equipment market, the key segments of which are drilling rigs and top drives, is characterized, on the one hand, by fleet ...

Thus the modern drilling rigs show significantly higher commercial drilling speed for the deep wells. In other words deep drilling is the future of gas production in Ukraine. We ...

The Kola Superdeep Well (SG-3) is an outstanding achievement of Soviet science and technology, drilled in Precambrian crystalline rocks and ...

The construction of the Ural Heavy Machinery Plant began in 1926, and in 1928 a special "socialist city [ru]" for its workers was also elected. The plant began operations in 1933 in compliance with the plans of the Government of the USSR for the industrialization of the country. During the pre-World War II period, Uralmash was dependent on foreign specialists and equipment. It was reporte...

Modernization of the drilling rig №171;Uralmash 3000 EUK№187; (drilling tower VMA 45/200-R) - 4 sets; Drilling mud preparation unit base with shelter frame and shelter complete with tanks, mixers ...

How the Borehole Was Drilled Drilling such an extreme borehole presented immense engineering challenges. The Kola team used a heavy-duty Uralmash-4E drilling rig ...

Uralmash drilling rig

The well construction programme involves two-stage drilling using an improved standard drilling rig Uralmash-4E to the depth of 7000 m in the first stage and a recently designed drilling rig ...

Uralmash Sectional Drilling Rig system that drills wells in the earth's subsurface. Drilling rigs structure and housing equipment used to drill oil extraction wells ...

The extra deep drilling rigs designed and manufactured at the plant made it possible to reach the depth of 13 km, like at the Kola Superdeep Borehole, and to obtain for the first time rock ...

The new drilling equipment and their individual elements were used by the Uralmash and the Barrikady factories in making new rigs and in modernizing the batch-produced rigs.

Drilling at Kola SG-3 began in 1970 using the Uralmash -4E, and later the Uralmash-15000 series drilling rig. A total of five 23-centimetre-diameter (9 in) boreholes were drilled, two branching ...

The Kola Superdeep Borehole is the result of a scientific drilling project of the former USSR. The project attempted to drill as deep as possible into the ...

Introduction The Uralmash-4E is a significant development in the field of heavy machinery, specifically within the context of drilling rigs used in the oil and gas industry. Manufactured by ...

At the facilities of "Plant URBO" - branch of "Uralmash Oil and Gas Equipment Holding" LLC in Ekaterinburg, the main units of drilling equipment are produced, and drilling rigs are ...

Uralmash drilling rig
