

Well drilling rig go so far down

What is a drilling rig?

A drilling rig is a machine that creates holes in the earth. Basically, they are tall towers that use a pulley system to hold "drill pipes" which are long drills that dig deep underground. How deep? Depends on how far down you need to go. Oil rigs come in many shapes and sizes with many different techniques.

Why are we drilling deep offshore?

Since oil takes millions of years to form, for all intents and purposes, it's a finite resource. We're drilling deeper because we're literally running out of oil. But depth comes at a cost. Deep offshore drilling requires more money and energy, not to mention hazards for both the environment and workers. Let us explain some of the challenges:

How deep do oil rigs go?

Depends on how far down you need to go. Oil rigs come in many shapes and sizes with many different techniques. This varies, but the average oil well in Texas alone is 3,500 feet deep. That's a pretty big hole & deep dig. The process goes something like this: first you find an oil well. Then you fence off the land and build a rig.

Can a state get permission to drill a new oil well?

This issue also arises in the offshore drilling industry. For instance, in California, the state can seek permission to drill new oil wells in state waters if it can prove that wells in adjacent federal waters are draining California-owned oil deposits.

How deep can oil drill?

It experiences more horizontal motion and a certain degree of vertical motion, but it allows oil companies to drill at depths of up to 7,000 feet (2,134 meters), well over a mile (1.6 kilometers) beneath the waves.

How do oil rigs work?

That's a pretty big hole & deep dig. The process goes something like this: first you find an oil well. Then you fence off the land and build a rig. Next, you drill all the way down to wherever the oil well is. Once the hole has been drilled, you then pump liquids at high pressure levels to remove the oil from the ground.

The well needs to be far enough away from your septic or neighbors septic system. You need to pay to have the water tested, so you don't die of cholera or dysentery.
