

Western explorer drilling rig

Where were offshore drilling rigs made, primarily?

Until the early 1970s, most offshore drilling rigs were built in U.S. yards (31 of the 327 rigs listed here were built in a year beginning with a 2). The offshore drilling rig was invented in Texas.

What was the first drilling rig to use subsea well control?

"The first floating drilling rig to use subsea well control was the Western Explorer owned by Chevron, which spudded its first well in 1955 in the Santa Barbara Channel," the society noted. Other offshore drilling rigs and production platform innovations followed.

When was the first offshore drilling rig built?

Based on this observation, in 1895, Henry L. Williams drilled two wells on the beach and then a third with promising results. These wells led to the construction of a pier that could support the weight of their land drilling rigs and led to the first offshore drilling rig.

Who drilled a well off a wooden pier?

H.L. Williams is credited with drilling a well off a wooden pier in the Santa Barbara Channel in California. He used the pier to support a land rig next to an existing field. Five years later, there were 150 "offshore" wells in the area. By 1921, steel piers were being used in Rincon and Elwood (California) to support land-type drilling rigs.

Was the Benton Rig 20 the first mobile offshore drilling unit?

While some would argue that the Benton Rig 20 was the first mobile offshore drilling unit (MODU), most do not believe this because it only operated in shallow inland waters. Because of this, the claim to the first genuinely offshore MODU was given to a rig called "Mr. Charlie" in 1954.

When was the first rig built?

The first was the conception of the MODUs in the mid-1950s, followed by a mild building period in the mid-1960s. In the early 1970s, there were significant numbers of jackups and semisubmersibles built. However, the major boom of the late 1970s and early 1980s has been unmatched in numbers of rigs built.
