

Wholesale drilling rig derrick

What is a derrick rig?

The primary function of a derrick is to provide the height, stability, and load-bearing capacity needed for drilling, casing running, and pipe string storage during oil and gas operations. Whether in offshore or onshore settings, the derrick is a critical component of a drilling rig derrick (or derrick rig).

What are Offshore Drilling Derricks?

Offshore drilling derricks require additional considerations due to the challenging marine environment. These derricks are typically more robust, constructed from materials resistant to corrosion and capable of withstanding high winds, saltwater exposure, and rough seas.

What is a mast derrick rig?

3. Mast Derrick Mast derricks are typically used on workover rigs and smaller drilling rigs. They are made from lattice or tubular legs and usually lean slightly toward the well (about 3° to 8°). This angled design helps stabilize the derrick during operations.

What are the different types of derricks used in drilling operations?

There are several types of derricks used in drilling operations, each designed to meet specific operational and environmental needs. These include: 1. Tower Derrick A tower derrick is a space-frame structure with four vertical edges and a truncated cone shape.

Who are Derrick Services (UK) Ltd?

The above mentioned are designed and manufactured in accordance with the operational requirements of your installation. Derrick Services (UK) Ltd design and manufacture Offshore Drilling Derricks, Masts and substructures. We are licenced to API Q1, API 4F, API 8C and ISO 9001:2000 Standards.
