

# Youtube well drilling rig for a hand pump

How do you use a well drilling pump?

To use the well drilling pump, dig a small pit next to the drill hole and fill it with water. Then, use the pump to draw the water out of the pit and into the drill stem and bit. As the water flushes back up the hole, channel it into the pit to be re-circulated.

Can I drill my own water well by hand?

What is a DIY well drill?

DIY well drilling involves making a water well on your property using your own tools and resources. This method can save money and provide a self-sustaining water source. It requires careful planning, the right equipment, and knowledge of local regulations. 2. How deep should I drill my well?

What kind of drill do you use?

Before we jump into the details, here's a list of what I used: Hand Drill: A regular corded hand drill, which I modified slightly for easier handling. PDC Drill Head: These are tough inserts that act as teeth, grinding through the earth. Centrifugal Pump: This pump helps circulate water during drilling to remove soil and debris.

How does a well pump work?

Centrifugal Pump: This pump helps circulate water during drilling to remove soil and debris. Filter Cloth and PVC Pipe: Essential for making the casing that protects the well from contaminants. Water Additives (Barasol): A biodegradable polymer to increase water viscosity and help the drilling process.
